

## Native Bottom Tab bar

A native experience

By Aaron Norman – Lead product designer

28th August 2021

## **The Problem**

The current Tab bars on native could be changed to give the users a better user experience and navigational path.

On Apps the tab bar should be at the top of a hierarchal path and not show sub categoies

# Guidelines

# **Apple Guidelines (HIG)**

## IOS Tab bar guidelines

- Use a tab bar to organize information at the app level
- Use a tab bar strictly for navigation.
- Don't remove or disable a tab when its function is unavailable
- Always switch contexts in the attached view
- Make sure tab bar glyphs are visually consistent and balanced

## Material Design (Android)

## Tab bar guidelines

4	4	
<b>4</b> 3		

#### Ergonomic

The bottom navigation bar is easy to reach on a handheld mobile device.

#### Consistent

When used, the bottom navigation bar appears at the bottom of every screen.

#### Related

Bottom navigation bar destinations should be of equal importance.

#### Should be used for:

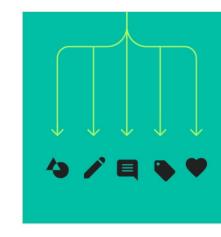

- Top-level destinations that need to be accessible from anywhere in the app
- Three to five destinations
- Mobile or tablet only

#### Shouldn't be used for:

- Single tasks, such as viewing a single email
- User preferences or settings

#### **Resource**

## **Apple Guidelines (HIG)**

## IOS Use of web views guidelines

**Avoid using a web view to build a web browser.** Using a web view to let people briefly access a website without leaving the context of your app is fine, but Safari is the primary way people browse the web on iOS. Attempting to replicate the functionality of Safari in your app is unnecessary and discouraged.

## Current Rejection problems 31/08/2021

#### **Resource**

https://developer.apple.com /design/human-interfaceguidelines/ios/views/webviews/

#### Apple rejected the Sportsbook Italy iOS app with the following feedback:

"Your app provides a limited user experience as it is not sufficiently different from a mobile browsing experience. As such, the experience it provides is similar to the general experience of using Safari. Including iOS features such as push notifications, Core Location, and sharing do not provide a robust enough experience to be appropriate for the App Store."
